The DNA can be subcloned together with DNA (AAT08484) coding for a humanised light chain (AAR77612) into vector APEX-3P (AAT08476) for expression of humanised antibody in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAb 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ₽
                            A DNA construct (AAT08487) codes for a humanised CDR-grafted light chain, designated 5G1.1 VL + IGHRLD (AAR77615), which incl. CDRs derived from mouse anti-C5 monoclonal antibody 5G1.1. The DNA can be subcloned together with DNA (AAT08484) coding for a humanised Fd (AAR77611) into vector APEX-3P (AAT08476) for expression of humanised antibody in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAb 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with
                                                                                                                                              Claim
                                                                                                                                                                                                              WPI; 1995-392923/50.
                                                                                                                                                                                                                                                                                                     02-MAY-1994;
                                                                                                                                                                                                                                                                                                                           01-MAY-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            framework sequence-altered Fd 5G1.1 VH + IGHRL (AAR77610), which includes CDRs derived from mouse anti-C5 monoclonal antibody 5G1. The DNA can be subcloned together with DNA (AAR7844) coding for a humanised light chain (AAR77612) into vector APEX-3P (AAR08476) fo expression of humanised antibody in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAB 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Evans MJ,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A DNA construct (AAT08481) codes for chimeric light chain 5G1.1M1 VL HuK (AAR77608), which can form the light chain portion of an Fab. The chimeric light chain includes CDRs derived from mouse anti-C5 monoclonal antibody 5G1.1. The DNA can be subcloned with DNA (AAT08482) coding for chimeric Fd (AAR77609) into vector APEX-3P (AAT08476) for prodn. of chimeric Fab in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAb 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with glomerulonephritis.
